Pedro Rentería Sánchez

Full Stack Developer (Node.js, TypeScript, React, PostgreSQL)
Relocating to Yuma, AZ | U.S. Citizen
pedrorenteriasanchezpersonal@gmail.com | github.com/Pedr0RS21 | linkedin.com/in/pedro-renteria-sanchez

SUMMARY

Junior Full Stack Software Engineer with a B.S. in Software Engineering and hands-on experience building RESTful APIs and web applications with Node.js, Express.js, TypeScript, React.js, Next.js, PostgreSQL, and MySQL. Experienced in role-based access control (RBAC), JWT authentication, layered architecture (MVC, Repository Pattern), third-party API integrations (WhatsApp, email), and legacy system migration. Interested in building products with AI agents and LLMs. U.S. citizen, available for remote roles or on-site roles in the Yuma, AZ area.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL (PostgreSQL, MySQL), HTML, CSS
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC), Middleware, Zod, express-validator, Nodemailer, WhatsApp Business API (Meta), MVC, Repository Pattern, SOLID Principles, Object-Oriented Programming (OOP)
Frontend: React.js, Next.js, Material UI (MUI), React Query, React Context API, React Hook Form, React Router, Axios, Responsive Design
Databases: PostgreSQL, MySQL, MariaDB, TypeORM (ORM), Database Migrations, Database Seeding, Relational Database Design
AI: AI Agents, LLM APIs
Tools & DevOps: Git, GitHub, Docker, Docker Compose, Postman, npm, yarn
Languages (spoken): Spanish (native), English (B2, CENBI certification)

PROFESSIONAL EXPERIENCE

Full Stack Web Developer (Junior) **Jul 2025 – Present**
Osmed Servicios Médicos San Luis Río Colorado, Sonora, Mexico

- Designed and built an internal full stack project and task management system with a REST API (Node.js, Express.js, TypeScript, TypeORM, MySQL) and a React/Next.js interface (Material UI, React Hook Form, React Query).
- Implemented role-based access control (RBAC) enforced on both the API and the UI, protecting every endpoint and view according to user permissions, with JWT authentication and custom middleware.
- Built business-rule validations for task scheduling and dependencies, including prevention of circular dependencies and date constraints between related tasks.
- Implemented automatic project progress tracking based on task completion.
- Built a web viewer for diagnostic studies that delivers results to patients through WhatsApp (Meta API) and email (Nodemailer).
- Migrating a legacy medical information system from WebDev to React/Next.js.

PROJECTS

CitaFácil – Appointment Scheduling System *Next.js, React, Express, TypeScript, TypeORM, PostgreSQL, Docker*

- Designed and built a full stack appointment scheduling app with role-based access control, partial payments, outstanding-balance reporting, and automated email reminders.
- Implemented notifications with the transactional outbox pattern and SKIP LOCKED batching to prevent duplicate sends across multiple instances.
- Wrote an end-to-end test suite (54 cases, about 440 assertions) against the live server and database; prepared production deployment with Docker Compose and Caddy (HTTPS).

Blog API *Node.js, Express.js, TypeScript, TypeORM, MariaDB/MySQL, JWT, express-validator*

- Built a RESTful API with 40+ endpoints for users, roles, posts, and nested comments, with JWT authentication and granular role-based privileges.
- Applied MVC architecture with the Repository Pattern and modeled complex relationships (ManyToMany, OneToMany, ManyToOne).
- Source code: github.com/Pedr0RS21/blog-api

EDUCATION

Bachelor of Science in Software Engineering Graduated
Universidad Estatal de Sonora (UES), Mexico
